PARTNER CAPABILITIES

EMICON ENGINEERING CONSULTANTS LLC

Engineering Consultancy, Energy Management & Sustainable Infrastructure

Emicon Engineering Consultants LLC brings extensive multidisciplinary engineering and project management expertise, supporting commercial, industrial and infrastructure projects through their planning, development, operation and modernization stages.

Its capabilities include engineering consultancy, project management, electrical and power-quality assessment, energy management, environmental engineering, vertical transportation systems and sustainable infrastructure solutions. Emicon's experience in these areas provides a strong technical foundation for organizations seeking to improve building performance, infrastructure reliability and operational efficiency.

> *Emicon's services extend across the project lifecycle, from technical evaluation and engineering design to construction supervision, quality management, commissioning and inspection. Its integrated approach enables clients to address engineering, operational and sustainability requirements through coordinated professional services.*

02

POTENTIAL COLLABORATION WITH BERVANE

Emicon and Bervane FZE can explore a collaborative service model combining Emicon's established engineering expertise with Bervane's focus on digital information management, technology-assisted workflows and project coordination.

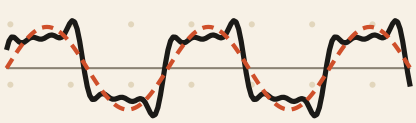

An important opportunity lies in facility and infrastructure management. Engineering drawings, equipment inventories, maintenance records, inspection reports and spatial information can be organized into structured digital datasets to support more efficient asset monitoring and maintenance planning.

Bervane could coordinate the development of customized digital information workflows, while Emicon contributes specialist engineering evaluation, technical inspections, energy-performance analysis and project management services.

Further opportunities may include engineering-data digitization, GIS-supported infrastructure records, electrical asset documentation, energy-management reporting and digital support for building maintenance programs.

The proposed collaboration could also support clients seeking to modernize existing facilities by connecting engineering expertise with accessible digital records, inspection information and ongoing maintenance requirements.

Through a coordinated delivery arrangement, Bervane would manage agreed client requirements, reporting and technology integration, with Emicon providing specialized engineering services within its professional scope.

TOGETHER

03

> *Together, the companies could offer clients a practical combination of engineering knowledge, digital information management and coordinated project delivery, helping improve the reliability, accessibility and long-term usefulness of technical information.*
